What are the most common Photoshop features? Most photographers find that the most essential features of Photoshop are: 5. Touch up You want your images to look as good as possible. The most common Photoshop task is to correct the flaws and imperfections in an image. These flaws include: Smudges Spots Grainy or unsightly details Out-of-focus areas Blurry areas Excessive lightness or darkness You may not find Photoshop's touch up tools as effective at correcting flaws as you find with other programs such as Lightroom. However, Photoshop can enhance your images with high-quality filters and visual effects. You can also do some basic editing using layers and masks. 7. Fill You may find it helpful to apply several different colours to an image. For example, you may create a visual variety in a photo of a person by filling a bright background with a different colour. You can choose the colour of the fill and you can set the transparency or opacity of the fill, which controls how much the selected area of the image is filled. You can create different types of fills. For example, you can fill a person in a photo by using the Spot Healing Brush or the Face Finder. 8. Layer Masks You can place a mask over an image layer to mask that layer. You can then apply a selection to a masked layer to select the part of the image that you want. You can control how much or how little of the image the selection will cover. You can create masks from other layers to create compound masks. For example, you can use a layer mask to create a mask that includes parts of other images. 9. Adjust Photoshop's Adjust layers are similar to layers in other image editors. They allow you to make changes to an image or to change the visual appearance of an image without going to a different layer. You can use these tools to change: The brightness of an image The colour of an image The saturation of an image The exposure of an image The sharpness of an image You can use the Adjust layers to change these settings for the whole image or for only the layer that they are on. You can also use the channels in Adjust layers to make changes to parts of an image. 10. Transitions You can create special 05a79cecff

Q: Laravel5.6 and session not storing data, only different values So I got a bootstrap v4 web application running, and as a requirement i must use laravel 5.6 as a backend. So I've installed the package through composer, and it works fine. (I have already installed the package via php artisan) But the problem I get is, that session's don't seem to store any data: For example I try to create a new user: POST 200 OK 51.647 ms - - Here's my blade view: {{ csrf_field() }} @method('POST') {{ method_field('POST') }} has('email')?'has-error' : '' }}"> E-Mail @if ($errors->has('email')) {{ $errors->first('email
