Features Key:

Set in a Fantasy World The world of Tarnished is set in a fantasy land in which a powerful sword and magic reign.

Using clever dialogues and adding deeper meaning to the action adventure of the world of Tarnished, the story unfolds in a unique fantasy world all its own.

The main character's memories of his past are also all at play.

Transforming deep into another world full of atmosphere, the soul will be piqued by the story the world has to offer.

Authentic Dialogue In addition to musical sound effects and battles filled with excitement, the deeply scripted dialogue plays a huge role in the drama. You can experience the emotions of the characters from the world of Tarnished, and finely imagine what is going on inside their hearts.

12 Character Classes Without depriving you from equipping all over the enemy, we've brought back the classic class system and added new class types such as "Sneak Attacker". Even if you choose a specialized class, your style of play will become more spontaneous as you deviate from the specializations of other class types.

In addition, it is possible to create your own class type.

With a variety of playstyles to suit your preferences, there are no rules against you choosing what you want to do, so choose freely.

The variety of class types effectively determines the power of your class, however you should be careful to prevent fighting without thinking.

Battle System 6.0 Dice are removed from the battle system. We've made the battle system faster and more intuitive, and our battle system, "Maine" is now implemented. We've increased the number of monsters and added greater variety to the battles than in the past. The pursuit mode is more vivid.

We've also introduced a new battle style, "Brawling", which is a significant shift from previous quests.

To develop effective therapies for metastatic CRC, we must understand the mechanisms by which CRC cells disseminate and colonize the liver. Recent data from Dr. Nicholas Restifo's lab at MSK provide the first direct evidence that CRC cells spread to the liver through an epithelial to mesenchymal transition (EMT). This advance has important implications for the development of therapies targeting EMT. MicroRNAs (miRNAs) are small non-coding RNAs that regulate the stability and translation of target mRNAs. We have recently identified a novel role for miRNAs as tumor suppressors in colon cancer metastasis to the liver. In the previous funding period of this grant, we found that the expression of miR-34a in CRC cells inhibits liver colonization by targeting Slug, a key EMT inducer. In the present renewal application, we propose to explore the biological significance of miR-34a in the context of CRC liver metastasis. In our preliminary data, we show that miR-34a expression in CRC cells leads to an increase in
