Photo by Noah Schuyler/CNET What is Photoshop? Adobe Photoshop is a raster graphics software that allows you to create, edit, or manipulate images in a layered approach to allow you to produce a wide variety of effects. With its rich editing tools, the program combines raster (bitmap) images that are composed of tiny dots, called pixels, that make up the overall picture. Photoshop brings these pixels together to create a realistic or stylized appearance. In fact, Adobe markets Photoshop as a total desktop imaging tool. Photoshop allows you to create, manipulate, and save pixel-based images, including vector images like those used by the Web, print, and other media types. Images can be made up of just pixels or be combined with vector graphics to create a hybrid. You can also combine graphics and images into a vector file, which can be further edited and saved as pixel images. Vector images can also be converted to pixel images, making the ability to work with pixel-based images one of the many perks of Photoshop. There is also a completely separate program called Adobe Illustrator, which Adobe also markets as a professional design tool. Illustrator is based on vector graphics, meaning instead of a "pixelated" image, it consists of a series of connected paths and or shapes. There are also specialized versions of Photoshop such as Adobe Photoshop Extended, which includes even more options, and Photoshop Lightroom. These tools offer various compression and workflow features to help you manage your images on the go and from more places. Adobe has the tools for any level of user and can help even novice users complete basic tasks. It is also a program that supports a wide variety of industry standards. It supports JPEG and most other common image formats, and it also supports TIFF, PDF, EPS, and PSD. And despite the fact that it was originally only designed for the Macintosh platform, Adobe has made it available for Windows as well. Most Photoshop images start out on a computer screen as raster images. However, the whole process of creating such a file is usually made up of three distinct steps. The first step creates a raster image, which is essentially an outline or the the basic outlines of the image. The second step creates the pixels that make up the image. And finally, the final step combines the pixels with the areas that are unprinted to create the final image file. Keep an eye out for Photoshop tutorials that focus on that

Q: php loop or foreach to delete all the duplicate rows in mysql database I have two tables: 'images' and 'images_dupes'. Table 'images_dupes' contains ID, IMAGE, DATE_ADDED, TAGS. I have also a third table, 'IMAGES', that contains ID, IMAGE, DATE_ADDED I am currently looping through table 'images_dupes' using a foreach loop, but only checking if the ID is in table 'images'. While it is working, it is very slow when a lot of duplicates are found, so I was thinking if I could optimize it somehow using a while loop and just do the check in table 'images' but I don't know if mysql has some kind of function that can search for duplicates in a table. Any ideas? `foreach($images_dupes as $image) { $dupe_id = mysql_query("SELECT DISTINCT IMAGE FROM images_dupes WHERE DATE_ADDED='$imgdate' AND IMAGE='$image' AND TAGS='$stags' AND ID NOT IN (SELECT IMAGE FROM images)"); while ($dupe_id = mysql_fetch_array($dupe_id)) { $dupe_id[] = $img->get_id(); $img->delete_dupes($dupe_id); } }` A: This query will list duplicates for all columns in a single query `SELECT image, date_added, tags, count(*) as num FROM images_dupes GROUP BY image, date_added, tags HAVING COUNT(*) > 1` Note the use of HAVING and COUNT(*) > 1; MySQL does not support the use of the HAVING clause in a SELECT statement without aggregates. Q: PHP Sort array by value then by position I have an array of values and I want to sort by value then by key and save that new array. The final output needs to have the key as the new key and the value in each array as the value, in alphabetical order. The array is as follows: `Array ([AA] => 8 [BBB] => 0 [AAA] => 4 [XAA] => 6 [C] => 1 [AAAA] => 4 [DDDD] => 0 [EE] => 1 [HH] => 2 [KK] => 8)` What i want is: `Array ([AA] => 8 [BBB] => 0 [AAA] => 4 [XAA] => 6 [AAAA] => 4 [DDDD] => 0 [EE] => 1 [HH] => 2 [KK] => 8)` I've tried using `array_multisort` but this order the values by key, not by value. I've also tried `usort` but can't get it to order by the value. What am I missing here? A: It should be possible with `usort()` and a custom comparison function. Try this: `8, 'BBB' => 0, 'AAA' => 4, 'XAA' => 6, 'C' => 1, 'AAAA' => 4, 'DDDD' => 0, 'EE' => 1, 'HH' => 2, 'KK' => 8,]; function compare($a, $b) { if ($a === $b) { return 0; } if ($a === 'AAAA' && $b === 'DDDD') {`
