The game's "Ball Physics" systems use the data to create "realistic" ball movement – or at least it's as realistic as a FIFA game can be. This can include the use of velocity, spin, trajectory and acceleration. The game also features "collision prediction," which stops players from colliding with each other. Above: "RealPlayer Motion" mode can be used to simulate real-life ball movements. "RealPlayer Motion" mode provides a simulated movement of the ball, which has the option to be positioned at the player's actual position, a static position in front of the player or any random position. The resulting movement and trajectory of the ball can be controlled either in a straighter or curved direction, along with speed and acceleration. Above: "Velocity Challenge" mode can be used to track a real-life player's velocity. The game's "Velocity Challenge" mode lets players track the speed and acceleration of a real-life player, which can be displayed either in

a graph or on a “Zoomed” view. This is particularly useful for players such as Ballon D’Or winners Ronaldo and Lionel Messi. Above: “Expert Control” mode lets players control the movement of the ball. The “Expert Control” mode lets users take control of the ball at any time during gameplay, with options to control the spin, trajectory, heading and position of the ball. The new “Snapshots” feature can be used to create a saved gameplay state at any time, which can then be uploaded for the creation of custom game modes. Above: The “Zoomed” view can be used to track a real-life player. “Look of the Player” can also be used to create a custom player appearance. This feature shows a series of images which can be selected to create different looks. FIFA 22 will be available for PlayStation 4, Xbox One, PlayStation 3, Xbox 360 and PC.
