I've been trying to figure out how to handle FCM server registration ID's since the server registration ID's are seemingly irrelevant to Java's KeyStore methods (i.e. KeyStore.getInstance(...)) but I can't wrap my head around how they work. How are the Android FCM server registration ID's handled in the backend with MySQL or other database? My back end has a database of everything that's been

A: Let's do some math to see if you're getting something for free. The key is only good for 30 days. The key is good until Monday. 7 Days in a week / 30 days in a month / 2 months in a year = 3.33 per day. That means the key is good for \$3.33/user per day.
