In this tutorial, we take you through the basics of the Photoshop file structure, layers, and their function, and how to organize and manipulate your images with the tool. Getting Started With Photoshop First, you will need to start a new document in Photoshop. You can do so by going to File > New, or by pressing Command + Shift + N. The New Image dialog opens, allowing you to choose your new document, size, and color settings. Photoshop will give you the option to create a new Photoshop file, open an existing document, or open the default file template in Photoshop. Activate the new document by clicking OK. Next, you will need to set the size of your document. Most graphics and web design are created at 300 dpi (dots per inch), but other sizes are available. A good size to start is 3600 x 2200 pixels, as that size (width x height) is standard for most monitors, and will also give you plenty of room for layer stacking and saving. Create a New Document in Photoshop Next, you will need to make a new layer. A layer is a container or container-like object that groups and holds properties of an image together. You can think of it like a wrapper for your graphic. Activate the New Layer dialog box by pressing Command + Shift + L. Use the arrows to select the New Layer button, and click it to choose Create New Fill or Create New Stencil. In the New Layer dialog box, you can change the name of your new layer by clicking the name displayed there and entering a new name. Type in a name for your layer and press Enter to create a new, unnamed layer. The New Layer dialog box is a standard Photoshop dialog box. You can choose to fill the layer with a color of your choice, keep the layer white so that it doesn't show, or turn off the layer so that you can see what's underneath. Drag the color picker icon to set the color of your new layer to black, making the layer black by default. Your new layer, the 'pencil', is ready for you to start editing. You can create multiple layers in the same document. Layers can be stacked on top of each other to make edits and layout. Use Layers to Organize Your Images Once you have a new layer in Photoshop, it

Actor Robert De Niro was this week spotted surprising children at a Brooklyn school in New York and helping out with their classroom clean up. The film-maker's children Marty, 17, and Grace, 12, were seen at the Manhattan South High School donning their father's iconic white suit as the trio went about the task of helping students to clean out their classrooms. A source told People: "Marty and Grace's father was at the school helping students move furniture to make room for the incoming freshman class." "On their way to class, they spotted Robert De Niro, recognized him and came over to him. They all chatted for a bit before Robert said he would help clean the classrooms." "While it may not seem like the type of thing your average actor would do, Robert is a fantastic person. Plus he's got an awesome daughter!" Robert De Niro, 69, has dedicated his life to bringing education to children and recently made a poignant speech at the National Teacher of the Year awards in New York. He told the packed audience at the Manhattan Hilton: "I'm a teacher; it's one of my true loves. I want to see a children's garden where they grow their vegetables. "I want to see them do math and I want to see them do it so well that they can go to Cornell and Harvard." The actor was given the National Teacher of the Year award at the gala, beating out Adam Driver and Sandra Bullock. This story originally appeared in The Sun. The present invention relates to a trimmer assembly for use with a housing containing an electric shaver. There are many trimmers available on the market. Such trimmers usually comprise a fixed prong received in the housing of an electric shaver. These prongs are sharp and are received in the shaver housing to cut hairs to be shaved. A beard trimmer usually comprises a cap pivotally or slidably mounted on the housing. Beard trimmers usually include an electric motor providing rotational movement to the cap. This rotation causes rotation of the cutting element and movement of the cutting element out of and into the housing to cut hairs to be shaved. In the prior art, U.S. Pat. No. 5,087,030 issued to Ogawa et al. discloses

There are several different brushes that can be used to apply transparency, strokes, gradients, and so on. Brushes can have several different settings. For example, the width and the opacity of the brush can be adjusted. Below are a few tips and tricks about brushes. Aperture and Diameter There are several different sizes of brushes. You can select the Brush Size (2nd option from the right) and change the size and opacity settings. For a fixed-size brush, the only option available is the diameter. This is the diameter in pixels of the brush, not the size of the brush tip. For example, in the next image, the brush size is 90 pixels. The diameter of the brush is actually 20 pixels. However, the brush is a fixed-size brush, so the size of the brush changes according to the size and opacity settings. In the below image, the brush size is 14 pixels, and its diameter is 30 pixels (14 x 3). If you want to create a brush whose tip size can be set, you can use the first option in the toolbox, the Brush Tip Size (1st option from the right). Overlap and Spacing You can set the brush to overlap or space over the image. This is useful when overlapping multiple layers to get a combined brush effect. Click the Brush Properties icon at the bottom right of the image below to access this option. Interpolate You can use the Interpolate option to prevent the background color of a brush to show through from the background when the brush is applied. If you move the brush over an image that's not a solid color, the color can disappear in the area that the brush is moved over. Click the Brush Properties icon to access this option. Use an Eraser You can use the Eraser tool to remove unwanted pixels. This can be useful for removing small lines in illustrations that are not part of the design. You can use the Eraser brush to remove the pixels that are needed and leave the surrounding pixels intact. To create an Eraser brush, first make a brush from a type of tool as shown in the next image. Then select the Eraser tool and click the Eraser option. The following image shows the settings for the Eraser tool. The Circle Eraser is the most common version of the Eraser. You can click the
