For example, a house plan can have multiple elevations (level views), each with multiple "views" (slices). For example, a floor plan, an interior elevation, a roof plan, and a section or elevation view. A drawing can also have "slices", but only one per drawing. CAD tools, such as line, polyline, curve and text, are used to create drawings. The user can save and share drawings using a drawing file format. In the AutoCAD version range of software, the application is a "dynamic modeling" application, unlike conventional 2D drawing applications which are "static", requiring the user to manually set the viewing angle and rotation of the drawing. A user can view multiple elevations or "slices" of a building from the same file in different viewing angles, and with the Slices or View Panorama feature, every view and viewing angle can be saved in a single file. It has been used by architects and engineers to plan construction sites for skyscrapers, high-rise buildings, skyscraper clusters, or a building's structural system, together with its associated geometry (e.g., piping, beams, columns, etc.) and details. AutoCAD software is used to create drawings of the following: Architectural drawings (e.g., plans, section views, elevation views, plan views, profile views) Engineering drawings Mechanical drawings Civil engineering drawings Surveying and measuring drawings Building codes Land surveying drawings Pipes and piping Joists and joist systems Floor framing systems Flooring systems Wall framing systems Roof framing systems Steel framing Construction site drawings With the Release 2009 features, CAD software can be used to create schematics for electronic design automation (EDA). In Autodesk Design Review 2009, AutoCAD 2009 can also be used to create schematics for FANuc. AutoCAD features 3D features All AutoCAD features can be used in the 3D and 2D programs. However, there are some differences in their use. AutoCAD's 3D features can be used in conjunction with 3D CAD models, 3D "add-ins", 3D-enabled 2D CAD programs, and/or 3D "add-ins". For example, this feature could be used to produce a truss or pre-stressed concrete floor (with embedded reb

I have both System and the Dump so I can see what is happening. I am using the private class I created for all attributes with the interface of Attribute. I created an overloaded constructor that works the way I want. However when I try to load the XML file and then call the overloaded constructor I get the following error: Exception type:type of System.Xml.XmlException : Unexpected element Obviously it is looking for player_name and not the name I have for the attribute. This is the code I have SetAttributes(); public void SetAttributes() { Players = new Player[20]; Att = new Attribute[20]; } public override void Load(XmlReader reader) ca3bfb1094
