AutoCAD's design user interface (DUI) allows users to open, modify, and save files, which in turn can be opened and modified by other users. The program offers many different drawing features and tools, as well as the ability to import, export, and process CAD data. AutoCAD is used to create and edit drawings and drawings for many different industries and professions, from architects, engineers, drafters, and civil, construction, transportation, mechanical, electrical, and chemical professionals to architects and graphic designers. Drawing and plotting applications use geometric objects to model and illustrate geometric or numerical data. A graphical object may be represented by a circle, square, triangle, line, polyline, arc, curve, image, etc., and may be annotated with geometric properties such as line type, thickness, color, etc. A line object can be annotated with properties such as origin, direction, length, end point, and data values. A drawing is a collection of graphical objects that can be organized into a hierarchy of drawing layers and views. History AutoCAD began as a feature of the company's Inventor CAD package, available for personal computers (PCs) running the CP/M operating system. The first CAD package was written by (now-defunct) software firm Intergraph Corporation, and was sold as CP/M CAD. Autodesk acquired Inventor and CP/M CAD in 1992 and renamed them AutoCAD and AutoCAD LT (for DOS and Microsoft Windows, respectively). In 1992, the first version of AutoCAD was released for the PC and Mac, with the Mac version available only for the Classic Mac OS operating system and later for Mac OS X. The Windows version ran on MS-DOS, Windows 3.1, Windows 95, Windows NT 4.0, Windows NT 4.5, Windows 2000, and Windows XP. AutoCAD LT was introduced in 1993 as a cheaper alternative to AutoCAD, intended for novice users. However, over the years, Autodesk has slowly added more powerful features to AutoCAD LT. Fernando Escobar lost his leg above the knee after the driver of a bus he was riding on fell on him, according to ABC News. Escobar, 33, was on a swing at a park in Córdoba, Argentina, when a bus hit him. He immediately began searching for a prosthetic limb. He eventually discovered a prosthetic from prosthetics company Berliner. "It was a total shock," Escobar said. But after a two-month wait for the prosthetic to be custom made, Escobar was finally able to use it. "I thought I was dreaming when they finally gave me the prosthesis," Escobar said. But he's since had to be more careful when hitting the balls, because when he makes contact, the foot is harder to control. "I was really surprised that it felt like a regular shoe," Escobar said. "He is still learning, it's a difficult thing to lose your leg," Federico Falbo, the prosthetist who fitted the prosthetic for Escobar, told ABC. "It's hard for him to be more active because he has to be more careful in the movement of his new foot," Falbo said.
