Desktop and laptop computers use the Windows family of operating systems developed by Microsoft. The most well-known of these is Windows. Windows uses graphical user interfaces (GUI) and desktop metaphors, and its native file system is the Disk Operating System (DOS). There are four major types of operating systems, which can be classed by their capabilities and intended use:1. Windows, for personal use. This includes the Windows

2000 series, Windows XP, Windows Vista, and Windows 7. Android is a mobile operating system developed by Google, based on the Linux kernel and designed primarily for touchscreen mobile devices such as smartphones and tablet computers. The Android mobile platform has been downloaded over 730 million times since its debut in 2008, making it the world's most popular operating system for smartphones and tablet computers, and is used on many different devices, ranging from mobile phones to game consoles. As of 2017, there are over 2.4 billion Android devices in use, representing more than 70% of all smartphone subscribers worldwide (source: IDC, 2017). It's also estimated to have a revenue of $54.2 billion USD in 2017, with shipments topping the iPhone in each quarter since their launch. In 2012, Android overtook Apple's iOS for marketshare in the smartphone market, finally closing the lead it had held since 2011. 2. iOS, for personal use and enterprise deployment. This includes iOS, iOS 6, iOS 7, and the upcoming iOS 9. iOS is mainly a mobile operating system for smartphones running on ARM-based processors such as Apple's A-series and newer B-, A5-, A6- and A7-series chips found in devices such as the iPhone, the iPad, and the iPod Touch. In addition, iOS can also be used on many Apple Watch models, the iPad Mini, and Apple TV. 3. Various proprietary smart OSs, typically used for industrial automation and embedded devices. 4. Linux, in the server and supercomputing space. This includes NixOS, Debian, SUSE Linux Enterprise Server, Kubuntu, Ubuntu, Red Hat Enterprise Linux, and other distributions (such as the ones listed under Linux Foundation Collaboration on Smart OS Overview) that are built on Linux. An operating system is the software that takes control of a computer's hardware and performs the actions that we, as users, ask it to perform. An operating system manages the computer's resources, schedules work to be performed, manages input and output (I/O), manages memory, 6d1f23a050
