Firstly, I am not a petrol head. I was looking at this video: Which displays a top speed of approximately 380 km/h. I have a feeling that the car was actually running on wheels but could be wrong. My question is: Was this a hybrid race car or a real petrol engine driven car? A: That video is not run on rubber wheels but on track, so the car is fully driven by motor. The most you can get is a stationary mode or low speed mode with rear wheel drive. In a pro racing competition like this you see many different vehicles that have various powertrains. First of all a turbocharged car with a direct injection engine is quite fast but has very low torque and is not easy to drive but you can stay in it for some time. The T2 is an Audi which is based on the A8 and is more like the Audi A6 which is petrol engine with rear wheel drive. The wildcard there is that the Audi can use a diesel engine which gives more power. The Audi TT is another example which could be adapted to use an electric motor or gas engine, per minute by base rate of the wireless modem over an air interface.
