As I said, only if I use windows 7 and the wallhack hack. So far I've only used the wallhack and enemy tester and it has not work for me. Here's an example. I'm trying to make a wallhack and wallhack the settings. I press start and the game opens up then it disconnects me from the server. No error or anything it just says it's disconnected. Then I can either log in or exit out. I've done this to a few people so it's not the person. I've tried it on 3 computers and 4 different browsers on my computer.
