i just bought the 1.1.4 version of ziphone 2.5c from itunes, and it worked flawlessly on my phone. i'd just like to say that if you have problems, first try to delete it, and then reinstall it. and then try again. and keep trying until you get it. if it still doesn't work, try to find a different method to delete it, like deleting it from the recycle bin. then download and install the 1.4 version of the ziphone. that should work. this is a very helpful tool, and it has saved me many a time. good luck to you. i bought the 3.0 version of ziphone. it does not work. i have the same problem as everyone else. i jailbreak, sync, and it makes the phone work. a few minutes after that, it stops working, the phone turns itself off and on again, and that is the end of the story. the ziphone does not work correctly with the iphone 3g! it does not recognize the phone. i have the iphone 3g and iphone 3g touch. i have not tried to jailbreak with the 3g yet, but i have jailbroken with the iphone 3g touch and it has worked great. so i am sticking with jailbreaking with the iphone 3g touch. i bought my iphone 3g (32gb) on monday the 7th and jailbroke it. i found a couple of issues that i wanted to point out. i have it on 64bit but it doesnt matter which bit you use, 32 or 64. i was able to run it fine with v3.0 of ziphone. i have v2.5 of ziphone and when i put it on my iphone 3g, it says that it is not able to connect to itunes. it can connect to the ziphone, but it can not connect to the itunes. i have tried everything i could think of but it doesnt work. i have a note that if you have an iphone 3g, do not upgrade to 3.0. this is the biggest problem with the software and you will get a lot of problems.

Ziphone 3.0 64 Bit

Yeah it was some crazy that happened to me, I was reading a walkthrough on jail breaking and there was instructions to jailbreak before using the software update, I did what was needed but nothing happened at the end I asked a friend of mine how to fix it, he didnt really know but then i was like give me a shot, so I reinstalled my iPod and then I jailbroke it with the ziphone untill i got the white screnn and I was able to just connect my iPod to the computer and use my wifi network at school, then I clicked software update and that's when it worked, I then went on to unlock it and it worked, then I uninstalled the jailbreaking software and everything worked perfectly, my iPod was jailbroke but I didnt have to jailbreak, the firmware version is 1.1.4, but I dont know if that works with Movistar in Peru and I just looked at the stuff that you need to download to be able to use Movistar and it would work with other operators here in the US but I think it would work with Movistar but I dont know for sure and my phone keeps messing up and turning itself off when it shuts down and if I can use Movistar then that would be great but if not then I hope someone can help me with this problem Could someone tell me how to get my email on my iPod touch? Ive been searching the internet all day looking for help and I cant find anything. I have an iPod touch. I installed ziphone 3.0 and it said that it was jailbroken but when I tried to find it on my computer to use the ipod touch it didnt come up. I have a pretty new iPod touch so it could be fixed easily. Other people have it on their ipod touch and they have email on it. I would really appreciate it if someone can help me because I dont want to have to buy a new iPod touch 5ecBef588b
