The Lightroom 5 application has a new sorting system that is built in the Photos panel. Rather than being dedicated to Albums, Collections, and Folders, it gives the user the ability to include any type of folder structure. The folder structure names are color-coded to allow you to visually group folders. Sometimes, you just want to make quick changes and export. Photoshop has introduced some very useful new features that make simple tasks easy and fast. See for yourself, and let me know your thoughts on this workflow in the comments. I was never good at collages. For teaching purposes, I could make some of them, but a real one always seemed too challenging. When I first started working with Lightroom on my iPad, I went looking for a simple collage creator, and I think the best one I found was Hemo . This 15-day collage maker is quite different from Lightroom in that the collages can be exported via web services to Twitter, Facebook, and other sites for sharing. You can also email them directly from Hemo. I really used this app for four basic reasons: The first is that you can free yourself from the restrictions of the iPad's screen size. Hemo lets you create collages that can be as big or as wide as you choose. As long as you want to keep it simple, this is perfect. For example, you can add images to the top and bottom of the image without clipping. You can also add any type of background (image or colors), and you can move your image anywhere in the collage. You can also customize your own background colors and patterns.
