It was released in 2009 and is a major upgrade from Windows Vista. Windows 7 is based on the core of the Windows XP operating system, but with a major difference in that it no longer contains the Media Center software included in Windows XP. How long is the upgrade process? You can expect the installation process to take around 20 minutes, depending on the complexity of the installation. When you are done installing, you will be prompted to restart your computer. It will then automatically launch into the installation process to upgrade the OS. Will all of my applications work? Most applications will work in Windows 7. You can find out if your application works with the official Windows 7 upgrade guide. Can I upgrade using the Windows 7 DVD? You can use the Windows 7 DVD as a way to upgrade. This will not perform the installation of Windows 7 over your current installation, but it will allow you to upgrade from Windows Vista to Windows 7. I have a Windows 7 product key. Can I upgrade now? The problem here is that Windows 7 requires a new product key. If you do not have a product key, it is a good idea to save it. You can access your product key from the installation summary in Windows. Will I lose my software if I upgrade? No, as long as your application is not installed through the Windows installer, you will be fine. What if I already have a product key for Windows Vista? If you have a product key for Windows Vista, you should be fine. Windows 7 is based on the core of Windows Vista,

Jose Baez, an attorney for the defendant, said Daniel Cruz's family wanted him to be spared the death penalty. The trial of the 18-year-old has been delayed because of a gas leak at his Florida home. His former girlfriend, Courtney Reyes, 19, was pregnant when she was killed in March 2011. She was seven months pregnant with their baby, according to court documents. Mr Cruz is charged with second-degree murder and faces up to life in prison without the possibility of parole if convicted. The Florida Times-Union newspaper reported that when Mr Cruz - who is represented by a public defender - was told that he could face the death penalty, he said: "What do you think I'm going to do? "That's when I said I needed a lawyer and I needed one right away." Mr Cruz was ordered to be tested to determine if he was mentally competent. 'Great loss' On Monday, the newspaper said the testing was delayed until Wednesday when a judge will decide whether to proceed with the trial. Judge Daniel Hurley is also considering whether to grant the defence a change of venue, where the case could be moved because of the extensive publicity surrounding it. The judge ordered a postponement of the trial last week after

What's New in the XP Visual Tools?

XP Visual Tools is a suite for Windows XP that allows users to modify the look of the operating system. The effects can be applied on the desktop interface, folder or the Start Menu. The visual settings affect the appearance of these areas, while the sound scheme and animations are modified. The entire package can be previewed on the spot. A new visual style section is provided, in which the effects can be applied to a selected program, folder or process of an installed program. If the updates are not applied manually by the user, the visual customizations will be triggered at a certain interval. The look of the desktop can be changed with a specific color scheme by changing the desktop background. These settings can be altered manually at any time. In the case of the logon screen, the settings can be modified in bulk and then changed at a specified time. Q: How to convert String[] to List and then return it? I have a method that receives an array of strings and returns a list: public List Add(String[] strings) { List result = new List(); foreach(string s in strings) { result.Add(s); } return result; }

My goal is to shorten the code with a LINQ statement. I tried to do it with one line: public List Add(String[] strings) { return strings.Select(s => s).ToList(); }

and it works fine, but I don't know how to convert it to an array.

A: You can add an extension method on String to be able to directly call the extension method: public static string[] AsArray(this String s) { return s.Split(','); }

Then, you can do this: public List Add(String[] strings) { return strings.AsArray().Select(s => s).ToList(); }

Alternatively, you can use string.Join to concatenate strings into a single string: public List Add(String[] strings) { return string.Join(" ", strings).Split(new[] { ' ' }, StringSplitOptions.RemoveEmptyEntries).Select(s => s).ToList(); }

The first solution is more efficient, while the second solution is more readable.

A: One
