Such a versatile app deserves a versatile catalog. I wouldn't be surprised if extended catalog functions arrive within the next three to five years. I'm looking forward to seeing its next iteration. In the past, I've only used the features that interested me and avoided those that didn't provide value to me. I've always felt like if I didn't need it, I might as well use the other application. I have only recently become interested in using more of Photoshop's features, simply because I think it's possible that I'm missing out on some powerful features that I'll use down the line. So far so good. But some things can be confusing, especially when you already have experience with another application. What's the difference, for instance, between Bridge and Photoshop's file browser? I'm not sure what the difference is between an Adjustment Panel and a Layer. As to why you'd add or remove a layer, I don't know – I still haven't figured that out. The only way I'm ever going to figure them all out is by trying and using the various features to their fullest. Unfortunately, I can't help but notice that Photoshop has been moving further and further away from Lightroom in recent years. Whereas Lightroom is often criticized for perceived shortcomings in manipulation, this is not the case with Photoshop. I've never experienced any problems with Lightroom's manipulation, either, and it updates almost instantaneously, which is something I've never encountered with Photoshop.
