First, you must obtain a cracked version of the software from a trusted source. Once you have downloaded the cracked version, you must disable all security measures, such as antivirus and firewall protection. After this, you must open the crack file and follow the instructions on how to patch the software. Once the patching process is complete, the software is cracked and ready to use.

The Clone Stamp tool makes selections by cloning an area of the subject. There are a wide variety of possible settings available, and you can specify the size and color of the area that you want to copy. You can also use the other clone tools—the Dodge and Burn tools—to adjust different areas of the image. What Is the Best Camera for You?
