Of course, I'm being a little unfair. There are still plenty of useful photo editing tools in Elements, but the software is shifting part of its focus to Adobe Lightroom. There are some similarities between Elements and Lightroom, but the two apps are defined by very different philosophies. Elements needs *editing* to be a free program. It can't lose money, so it jumps on any photo-editing feature that makes people happy, regardless of whether the technology has yet been proven. Lightroom, of course, is all about *organizing*. It's got a good and expensive catalog for the really critical and fairly infrequent photo editing, but this catalog isn't intended to be a base for creating a photo library. If you're an Organizer, you'll like Lightroom more than you'll like Photoshop Elements. 24 hours after I was upgraded to Lightroom 5, I remember telling my wife, "I think this could be the start of the switch." The updates aren't as tumultuous as the move to Lightroom. Right now, we're having our fun with an eight-year-old program, and with an expectation that a few months from now, we get the new version with all the stuff we don't like. Then we'll have to get off the old version completely. The third-party Solid Explorer plug-in is overwhelmed trying to understand what's going on in Elements, and the Mozilla Firefox development team is tripping over this "update." And all these changes combined mean we won't be testing the new features -- we'll be kind of like the proverbial kid on a sugar cookie.

Keep in mind that in the year 2020, you can get a fully functional version of Adobe Photoshop at about a hundred dollars, but if you don't mind shelling out a hundred dollars every year for the

privilege, you can get an annual subscription to the Creative Cloud for about one hundred dollars. It's kind of remedial, in a way, because for most people who use Photoshop, they don't mind paying for a subscription via a three-year contract. What Is Adobe Photoshop?
