Click to add or remove layers, modify Layer modes and Opacity, add Layer Masks, and Scale and Rotate it. As an introductory tool, it gets the job done. The Filter tool is where it all begins. You can apply various filters, including a Glamour Glow, Grain, B&B, Add, Attenuate, Vignette, Invert, Beta, and Sharpen (called Smart Sharpen). Add a layer mask and adjust as needed to keep the perfect edge or curve. Bringing it all together and pulling it all into one, these commands address Whites, Blacks, Shadow, Brightness, and Sharpness. The adjustments are at your fingertips. One of them is called Whites/Blacks, adjusting the mid-tone gray of a picture. It also has an Adjustment brush if you want to edit individual areas. The Adjustments panel is a quick way to check the exposure and contrast of a picture. You can adjust the Middleton gray, Green-Red, Blue-Infrared, Color temperature, and Hue/Saturation. However, there's also an Adjustment brush if you're feeling brave. Go to Filter > Blur, and type in some number. Depending on the setting, it will have two very different results. You can "secure" the pictures (straighten) and "flame" (blur it, making it bubble).
