INJECTION MATERIALS

Over the past years, Injection Molding, or the 3D printing process has been growing in importance, as a method of production. It is becoming a daily reality, where we can produce standard and custom products with the innovative 3D printer. 3D printer (or additive manufacturing) is capable of manufacturing parts in anything from plastic to metal. In recent years the type of material used for printing varies, but the quality and resolution vary too. Commercial plastic print providers are able to print according to the most demanding parameters, at very high resolution and at very fast rates. We also provide for printing of plastics with a lower cost. We assist both, with the procurement of the right material, as well as with the material processing and printing of your product.

Q: Compiler optimizations affects code execution time? Do compiler optimizations have any affect on code execution time? If not, why? A: Compilers are pretty smart at making good, efficient code. In the absence of (relevant) information, any other information is too vague. A: Short answer: Yes. Long answer: The reason is that every compiler has a optimizing compiler, and optimizations may not be turned off. Optimizations will be turned on/off per a switch/command line parameter. For instance, suppose you

make a method that you know will not be called often, but you want to make it as fast as possible. In that case, you can be sure the compiler
